

THE LATEST ERGONOMIC EYEWEAR FROM CARRERA **THE SCIENCE BEHIND PERFORMANCE**

The design and technical characteristics of the new Carrera C-ALU3, C-TF02 and R&B X-LITE eyewear are the result of advanced studies in ergonomics, the science that analyses the interaction between individuals and technologies aimed at improving athletic performance. Careful research has led to innovative materials and leading-edge construction technologies.

NXT® LENSES

Available for specialised distribution within the sporting goods retail channel, NXT® lenses guarantee superior scratch and impact resistance as well as being extremely lightweight.

MPS² (Multiple Position System)

MPS² is the exclusive system for adjusting the height and width of the nosepiece. This double adjustment maintains an optimum pantoscopic angle for unparalleled protection, stability and a comfortable fit.

MEGOL

A natural hypo-allergenic rubber, MEGOL was developed by the tyre industry to increase grip on wet roads. The Carrera nosepiece and temples are coated in hydrophilic Megol, which guarantees maximum stability during sports, even in the presence of humidity and perspiration.

ADJUSTABLE TEMPLE TIPS

By pressing them lightly with the fingers, the temple tips can be adapted to suit any face shape. This simple operation personalises comfort and optimises eyewear stability.

The collection:

> C-ALU3

Fusing advanced studies in ergonomics with the most technologically advanced materials, **C-ALU3** glasses represent the ultimate in lightweight design, versatility and performance.

They are equipped with a set of interchangeable lenses in different colours to be inserted in case of different light conditions and, depending on the models, are also available with NXT® lenses.

C-Alu3 is available in the following colours; Aluminium Brushed Matte, Aluminium Matte, Aluminium Brown Red and Aluminium Brown Black.

> CTF02

A prime example of technology and leading-edge design, CTF02 glasses are simply the best response to the needs of the most demanding athletes. The MPS² system allows for adjustment of height and width of the nosepiece, and for the adjustable of the temple tips in Megol, a hypo-allergenic material that confers maximum stability even in the presence of perspiration and humidity.

CTF02 is equipped with a simple lens changeover mechanism that enables the lenses to be swapped in seconds. It also comes with a wide selection of lenses that covers all transmittance categories. The model is also available with polarised lenses as well as NXT® lenses.

CTF02 is available in White Matte Satin, Black Matte Red, Matte Black Transparent, Satin Light Blue and Blue Satin Transparent.

> R&B X-Lite

R&B X-Lite glasses guarantee ultimate comfort due to the wide field of vision, ventilation and lens changing system. In addition they are supplied with a set of interchangeable lenses in various colours to be inserted in case of different light conditions. This style is also equipped with a "Fast & Easy" lens changing system, which enables the lenses to be swapped in seconds.

R&B X-Lite is available in Transparent Satin, Black, White Matte Satin, Black Transparent Satin, Light Blue and Red Matte.

The quality of CARRERA helmets and sunglasses is guaranteed by the experience of the Safilo Group.
